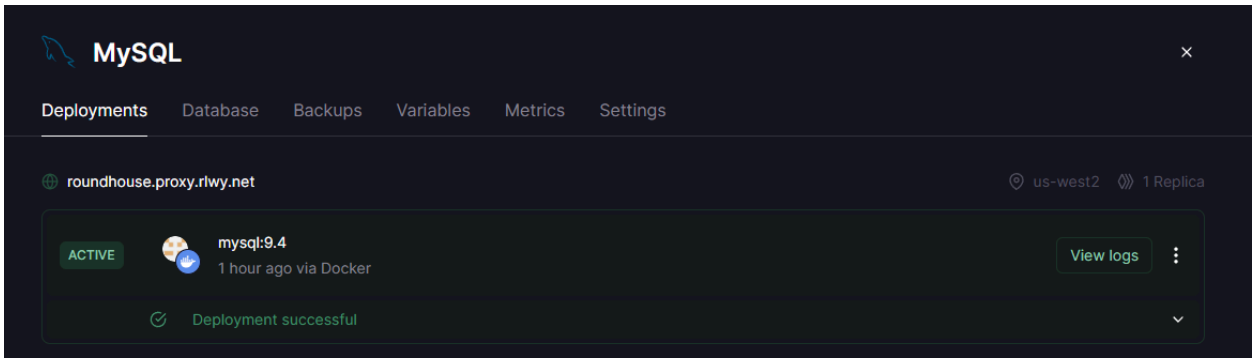
IT 105 – Information Management I

Phase 4: Cloud Backup and Integration of Emerging Database Technologies

Platform Used

- **Cloud Platform:** Railway
- **Service:** MySQL Database

Railway was used to deploy a cloud-based MySQL database. It provides an easy setup and remote access for database management.



Description: The screenshot shows the MySQL database successfully deployed on Railway with an active status, indicating that the cloud database is running.

Tables / Query

```
SELECT
    (SELECT COUNT(*) FROM categories) +
    (SELECT COUNT(*) FROM suppliers) +
    (SELECT COUNT(*) FROM customers) +
    (SELECT COUNT(*) FROM products) +
    (SELECT COUNT(*) FROM sales) +
    (SELECT COUNT(*) FROM sales_items)
AS total_records;
```

total_records
135070

1 row

Description: A SQL query was executed to verify the database contents. The result shows a total of 135,070 records, confirming that the database was successfully restored and is functioning correctly.

Conclusion

The database was successfully deployed to Railway and validated using SQL queries. The screenshots confirm that the system is operational in the cloud environment.
